Q: What exactly do the headlights come with? A: All the headlights we sell are complete assemblies that come with the entire housing. Unless otherwise noted, they do not come with bulbs and wiring. You would use your factory bulbs and wiring. When you receive them in the mail from us, you take them out of the box, bolt them up, pop in your factory harness and bulb, and you can immediately turn on the new headlights. Headlights are certainly plug and play products. Q: What are the different types of aftermarket headlights, and how do they differ? A: Different housings are available, including black, chrome, and others. Also, some custom headlights are equipped with "angel-eyes" technology also known as "halos" , where there are 'light rings' in the headlight that give a truly custom look to your car. One really recent trend by custom headlight manufacturers is to include LED lights along the perimeter of the headlight unit, which is a really slick cutting edge feature that's like putting on a light show in your headlight unit! A: In general, it's perfectly safe to use HID lighting kits in pretty much any headlight housing so long as you use standard watt HIDs. Most HID lights actually produce less heat than standard halogen lights, although the higher-wattage watt HID kits do produce a bit more heat than the watt versions. For that reason, we recommend sticking with watt HID kits in aftermarket housings and especially fog light housings to stay on the safe side. All HID kits Andy's sells are watt versions unless otherwise noted. Most instances of melted light housings that we have come across were due to improper seating of the bulb, so make sure that your bulbs are properly installed and sit flush with the mounting base on the housing. Q: How do you install headlights? A: Headlights are manufactured to exact OEM specifications for easy installation, so you simply remove your factory headlights and bolt in your new projectors. Basic hand tools are required and installation can be completed in a matter of minutes. Q: Why buy headlights? A: We sell a variety of headlights, including factory replacement headlights and projector headlights. Projector headlights can really enhance the appearance of your car and help improve driving visibility at night. Your car will have a sleek, custom look to it at night as people see you projectors in their rear view mirrors. During the day, they also give your car a custom look since most projectors have a translucent lens as opposed to the opaque lens that most factory headlights have. The projector light itself also emits a brighter, more vibrant light than your factory headlights, so driving visibility at night will be improved. Q: Are headlights sold in pairs? A: All headlights shown on our site are sold in pairs unless otherwise noted on our site. A: Unfortunately, the lenses are not available separately. A: Yes, it is commonly accepted that watt HID kits are perfectly safe for projector housings. However, watt kits may produce too much heat and can potentially melt the housing. Also keep in mind that most projector headlights use H1, H4, or H11 bulbs, which may not be the same bulbs used in your original headlights. So make sure to verify the bulb type used in your projector headlights before ordering an HID kit for them. Filter Your Results. Headlights Anzo 2. In Pro Car Wear 6. Spec D 6. Spyder Auto 5. The Chevy S10 has been around for many years and undergone several generational upgrades. The headlights on the S10 have also been modernized from the old sealed beam units to the newer composite halogen bulbs. Whichever type of S10 you own, you can save some money by replacing the blown headlight yourself. Locate the removal pins 2 on each side for the headlight assembly at the top of the radiator support and remove the protective black caps from them. Use the ratchet and socket to remove the pins. Pull the headlight assembly out of the front of the S10 and unplug the wire harness plugged into the back of the headlight. Turn the bulb counterclockwise to remove it from the assembly. Insert the new replacement bulb into the headlight assembly and turn clockwise until it clicks in place. Plug the wire harness into the back of the new bulb and test by turning on the lights before securing the headlight assembly. Replace the headlight assembly and pins and tighten. Remove the tools and old bulb and close the hood. Remove the screws from the headlight retainer using a magnetic-tipped Phillips head screwdriver. Plug the new headlight in and test it by turning on the lights first before replacing the retainer. Place the headlight back into the cavity and replace the retainer and screws. Jody L. Campbell spent over 15 years as both a manager and an under-car specialist in the automotive repair industry. Prior to that, he managed two different restaurants for over 15 years. Campbell began his professional writing career in with the publication of his first book. Step 1 Open the hood of the S Step 2 Locate the removal pins 2 on each side for the headlight assembly at the top of the radiator support and remove the protective black caps from them. Step 3 Pull the headlight assembly out of the front of the S10 and unplug the wire harness plugged into the back of the headlight. Step 1 Remove the screws from the headlight retainer using a magnetic-tipped Phillips head screwdriver. Step 2 Pull the headlight outward and remove the retainer. Step 3 Unplug the wire from the back of the sealed beam headlight and remove it. Step 4 Plug the new headlight in and test it by turning on the lights first before replacing the retainer. Do not touch the glass bulb as oil in our skin can damage halogen headlights. One part that often needs a replacement or upgrade in this model is the Chevrolet S10 headlights. These automotive lights keep you and other vehicles safe on the road. Your headlights allow you to see the road ahead, objects, road signs, vehicles, and pedestrians in the dark. These are available individually, in sets of two, or as part of a kit. The Chevrolet S10 is a compact pickup truck that launched in What made this model a hit among truck enthusiasts is its potential for customization. Dim or busted headlights Over time, the brightness of your headlight may grow dimmer until your Chevy S10 headlight bulb goes bust. Dimming is a clear sign that your headlights are nearing the end of its service life. While changing the headlight bulb can resolve this issue, there are cases where the problem involves a corroded ground wire or electrical damage in the assembly. Because of its location above the bumper, your headlights are likely to get cracked and damaged in a road accident. Even if the bulb is operational, a cracked headlight lens cannot protect it from road debris and the elements. This puts all internal components at risk of corrosion and damage. The impact of a collision may knock your headlights loose. The design of your headlights has a huge impact on the overall look of your truck. This is especially helpful if you want to get creative and break away from a basic look. A clear line of sight is critical to keeping safe on the road, especially when driving in low light conditions. Your headlights allow you to see more than just the road ahead of you. These lights make it easier to spot objects, road signs, vehicles, and pedestrians in the dark. These lights also alert drivers ahead of you of your presence. A Chevy S10 headlight bulb may or may not come with the assembly, so take the time to double-check before making a purchase. There were generations of the Chevrolet S10, and each with parts that may lack compatibility with another model year. This will narrow down the search results to all compatible parts. Fog and moist found inside and even outside of the headlight are reasons why the light can't illuminate well because they reflect the light backwards. If there's fog or moist found on the surface of the headlight, then it can be easily wiped off using a clean rag. However, if it's located inside the headlight, then it will be a more difficult task. One way to do it is by drilling a small vent hole on the top of the headlight housing, so the moisture will evaporate through the hole. When the headlight is already clear, remember to cover the hole with a tape strong enough to keep any moisture away. A fast and easy way to check the aim of a headlight is by simply parking the car 10 to 12 feet away from a wall or a garage door, and by

switching both headlights on. The low beams from the headlights should be aimed straight at the wall, and the brightest part of both beams must not be higher than the hood of the car. To check the high beams of both headlights, just switch it on, and see if the beams moved up a bit. It shouldn't be too high from the low beam. The first reason why the headlights failed to turn on is that they could have already burned out. Remember that the headlight has a limited lifetime, and the more it's used for driving at night, the sooner it will expire. But before looking for a replacement for the burned-out bulb, check the electrical wires at the back of the headlight. It may be damaged or the connection is loose. If the wires are in good condition, and there's no sign of damage or improper connection, then it's time to look for a replacement. We've Made a Site Update. Refresh to the latest version.
